

## **Corporate Social Responsibility Initiatives**

The Company's renewable energy projects are covered by service contracts awarded by the Department of Energy. Inherent in these service contracts are the commitments of the Company on its corporate social responsibilities to the communities where its projects are located or will be undertaken. During the permitting works on these projects, coordination with the local government units concerned includes discussions on the social and community responsibilities and initiatives to be undertaken by the Company. These initiatives shall be made more concrete and finalized after the predevelopment stages of these projects and during the development phases of these projects. To date, the projects of the Company are still in the permitting and/or pre-development stages.
